Intro to HPC Course Evaluation

PDC Center for
High Performance Computing

Welcome, m1ke! ([logout](#))

Please take the time to fill out this form. It's probably easiest to fill it out as you proceed through the course. The feedback allows us to improve the course for next year. If you have questions, more detailed [help](#) is available. Thank you!

Help

PDC Center for
High Performance Computing

Here are some answers to a few questions you might have about the evaluation system.

Do I have to fill in the entire evaluation all at once?

No, you may leave and return to add or change your evaluation at any time during the course. At some point (as yet undetermined) we will close down the system, but it will probably be some days after the course is over.

Do I have to logout when I am done?

It is not required. When you click on the logout link, your authentication is nullified and no one can gain access to your evaluation without the proper username and password. So, from the security standpoint, it is probably best. Note that closing your browser may not be the same thing as logging out. It depends on how your browser handles cookies (see more about cookies below). Logging out expires your session cookie.

Once I log in, how long do I have to fill in information? Is there a time limit?

Your session expires after an hour. This is for security reasons. This means that when you fill in some part of the evaluation, it is best to press the submit button directly afterwards. In any event, don't type in a long comment, then wait over an hour before you press submit or you may lose your work. Remember, after you press submit, you can always return to the page and update your work later, so there is nothing to lose by submitting your entires without delay.

In the course evaluations, I sometimes see a course that is split into "lecture" then "lecture continued", etc. Do I need to fill in the "continued" parts or just the main part?

It's really up to you. If you want to put all your comments and ratings in the first occurrence of the course (lecture or lab) and skip the "continued" parts, that is fine. If you split it up, that is fine also. The course evaluations were generated directly from the course schedule. That is the why you see the continuations. No matter how you fill in the information, it will be helpful to us to have it.

Can I be logged in more than once? I would like to fill in the evaluation in parallel :-)

You can log in more than once; however, at this point, filling in the evaluation on two different computers at the same time should be considered experimental. Use at your own risk. If you try it, make a few small changes and see what happens first before committing too much time and effort. Let us know how it works. This system is still new for us too!

Does the system use cookies? If so, what information is stored in the cookie(s), and for how long?

The system creates a single session cookie that only records that your username has logged in, and that the session related to this username should expire after an hour. This cookie is automatically deleted after an hour, and no personal information or informaton about your computer or network connection is stored in it.

Does the system use javascript?

No. Neither java nor javascript is used. If you prefer, you can turn those off in your browser, although having it on will not cause problem either.

Evaluation for Monday, 2010-08-16

Please consider each lecture and lab separately in the following daily evaluation.

- 9.15-10.00 **Welcome to PDC and the Summer School** (EL, JO)

Relevance: Very Good Good Fair Poor Not selected

Quality: Very Good Good Fair Poor Not selected

Comments:

- 10.15-11.00 Lecture: **Massively Parallel Computations: Where Are We Now?** (SH)

Relevance: Very Good Good Fair Poor Not selected

Quality: Very Good Good Fair Poor Not selected

Comments:

- 11.15-12.00 Lecture: **Introduction to PDC's environment** (EM)

Relevance: Very Good Good Fair Poor Not selected

Quality: Very Good Good Fair Poor Not selected

Comments:

- 13.15-15.00 Lecture: **High-Performance Computer Architecture** (EH)

Relevance: Very Good Good Fair Poor Not selected

Quality: Very Good Good Fair Poor Not selected
